

# Manual for the JHU generator

For simulation of a single-produced resonance at hadron colliders  
(version 2.1.3, release date August 20, 2012)

The generator from [1, 2] is a model-independent generator for studying spin and parity properties of new resonances. Please cite [1, 2] if using the generator.

The code can be downloaded from [3]. The generator outputs LHE files which can be passed to parton shower programs for hadronization. The generator purposely does not output sensible cross-sections but rather deals with numbers of events which can be compared for different signal hypotheses.

## I. INSTALLATION

Register and download the package from [www.pha.jhu.edu/spin](http://www.pha.jhu.edu/spin) and untar the file. In the `makefile`, you have two options for compiler, `Comp = ifort` or `Comp = gfort`. Then simply compile with:

```
$ make
```

## II. CONFIGURATION

There are two ways to configure the program, either from the command line or in the file `mod_Parameters.F90`. The command line configurables are defined in the file `main.F90`. When one change the fortran code directly, one should also recompile the code for changes to take effect. In general, command-line configuration handles general event properties while the configuration file handles all of the couplings and physics handles.

### A. Command line configuration

The list of command line configurables and the default values are (also defined in the `README`):

- Collider=x (Collider: 1=LHC, 2=Tevatron), default value:1
- VegasNc1=x (number of evaluations), default value:5000000
- PChannel=x (partonic channel: 0=glu+glu, 1=quark+antiquark, 2=both), default value:2
- PDFSet=x (parton distr. functions, 1=CTEQ6L1 (2001), 2=MSTW(2008),  
2xx=MSTW with eigenvector set xx=01..40), default=1
- DecayMode1=x (decay mode for vector boson 1), default x=0
- DecayMode2=x (decay mode for vector boson 2), default x=0
  - x=0: X-> Z1 Z2, Z1->2l,
  - x=1: X-> Z1 Z2, Z1->2q,
  - x=2: X-> Z1 Z2, Z1->2tau,
  - x=3: X-> Z1 Z2, Z1->2nu,
  - x=4: X-> W1 W2, W1->l nu,
  - x=5: X-> W1 W2, W1->2q,
  - x=6: X-> W1 W2, W1->taunu
  - x=7: X-> gamma gamma
- DataFile=x (name of the output file), default value: "output"
- Process=x (gives the resonance spin 0,1 or 2)
- OffXVV=xyz (only applies to Higgs production, x,y,z can be 1 or 0 indicating real off-shellness for Higgs, Z/W boson 1/2, resp.), default 000 if a parameter is not specified
- Unweighted=x (generates weighted or unweighted events), default value: ".true."

A few more details on some particular parameters:

- **VegasNc1**: This is the number of evaluations for the program to make, NOT the number of events generated. The efficiency depends on the set of parameters one uses.
- **OffXVV**: The program does not work for  $ZZ$  or  $WW$  if you set them to be on-shell (`OffXVV="\*00"`) and the mass of the  $X$  resonance to be below the  $m_{VV}$  threshold. In general, the more off-shell the process, or the more "1" you have, the less efficient the **VegasNc1** evaluations are. Specifically, if you are interested then, in producing a resonance with mass below threshold  $m_{VV}$  with a very narrow resonance, it is most efficient to generate with `OffXVV="011"`
- **PChannel**: This parameter is only meaningful in the spin-2 case. For spin-0, production is possible only via the  $gg$  process and for spin-1, production is only possible via the  $q\bar{q}$  process.
- **DecayMode2=7** note: Valid for spin-0 and spin-2, only `OffXVV=000` or `100` are possible.

Then, as an example of running the generator, you could do:

```
./JHUGen Collider=1 Process=0 VegasNc1=100000 PChannel=0 OffXVV=011 DecayMode1=0 DecayMode2=0 \\  
Unweighted=.true. DataFile=test1
```

---

*N.B.* There is a beta-version of the generator which has improved efficiency for the generation. However, it is currently only available for gluon-gluon initiated processes. It is by default turned off, but it can be accessed in the file `main.F90`.

```
logical,parameter :: useBetaVersion=.false.
```

---

## B. Configuration in parameter file

The `mod_Parameters.F90`, one does all the configuration of the couplings of the resonance.

### 1. General parameters

Each generation run is different when this is `.true.`

```
seed_random = .true.
```

In the case when `PChannel=2` for a spin-2 resonance, the user can define the ratio of the production of  $gg$  and  $q\bar{q}$  production.

```
fix_channels_ratio = .true.
channels_ratio_fix = 0.25d0      ! desired ratio of
                                ! N_qq/(N_qq+N_gg)
```

*Only for the  $4l$  final state*, one can include interference effects between the leptons (*N.B. This feature is yet to be fully validated*). The interference is controlled by the parameter:

```
includeInterference=.false.
```

The remaining parameters are more-or-less self-explanatory.

```
! we are using units of 100GeV, i.e. Lambda=10 is 1TeV
M_Z      = 91.1876d0 *GeV      ! Z boson mass (PDG-2011)
Ga_Z      = 2.4952d0 *GeV      ! Z boson width(PDG-2011)
M_W      = 80.399d0 *GeV      ! W boson mass (PDG-2011)
Ga_W      = 2.085d0 *GeV      ! W boson width(PDG-2011)
M_Reso    = 125d0 *GeV        ! X resonance mass (spin 0, spin 1, spin 2)
Ga_Reso    = 5d0 *GeV         ! X resonance width
Lambda    = 1000d0 *GeV       ! Lambda coupling enters in two places
! overall scale for x-section and in power suppressed
! operators/formfactors (former r).
alpha_QED = 1d0/128.0d0       ! el.magn. coupling
sitW = dsqrt(0.23119d0)       ! sin(Theta_Weinberg) (PDG-2008)
Mu_Fact = M_Reso              ! pdf factorization scale
LHC_Energy=7000d0 *GeV        ! LHC hadronic center of mass energy
TEV_Energy=1960d0 *GeV        ! Tevatron hadronic center of mass energy
```

```
Br_Z_up = 0.1657d0 ! branching fraction Ga(up)/Ga(hadronic)
Br_Z_ch = 0.1657d0 ! branching fraction Ga(charm)/Ga(hadronic)
Br_Z_dn = 0.2229d0 ! branching fraction Ga(down)/Ga(hadronic)
Br_Z_st = 0.2229d0 ! branching fraction Ga(strange)/Ga(hadronic)
Br_Z_bo = 1d0-Br_Z_up-Br_Z_ch-Br_Z_dn-Br_Z_st ! branching fraction Ga(bottom)/Ga(hadronic)
```

## 2. Spin-0 parameters

The **\*hg\*** parameters control the coupling of a spin-0 resonance to gluons in the production mechanism. The **\*hz\*** parameters control the decay. In practice, the production parameters are not having a large effect since angular corrections from the production mechanism are lost for spinless particles. One has the options to set the spin-0 couplings either from Eq.(9) or Eq.(11) from Ref. [2]. To switch between the two, use the parameter **generate\_as**.

```
logical, public, parameter :: generate_as = .false.

!-- parameters that define on-shell spin 0 coupling to SM fields, see note Eq.(1)
complex(8), public, parameter :: ahg1 = (1.0d0,0d0)
complex(8), public, parameter :: ahg2 = (0.0d0,0d0)
complex(8), public, parameter :: ahg3 = (0.0d0,0d0) ! pseudoscalar
complex(8), public, parameter :: ahz1 = (1.0d0,0d0)
complex(8), public, parameter :: ahz2 = (0.0d0,0d0)
complex(8), public, parameter :: ahz3 = (0.0d0,0d0) ! pseudoscalar

!-- parameters that define off-shell spin 0 coupling to SM fields, see note Eq.(2)
complex(8), public, parameter :: ghg2 = (1.0d0,0d0)
complex(8), public, parameter :: ghg3 = (0.0d0,0d0)
complex(8), public, parameter :: ghg4 = (0.0d0,0d0) ! pseudoscalar
complex(8), public, parameter :: ghz1 = (1.0d0,0d0)
complex(8), public, parameter :: ghz2 = (0.0d0,0d0)
complex(8), public, parameter :: ghz3 = (0.0d0,0d0)
complex(8), public, parameter :: ghz4 = (0.0d0,0d0) ! pseudoscalar
```

## 3. Spin-1 parameters

The parameters below represent the couplings given in Eq. (16) from Ref. [2]. The **\*left\*** and **\*right\*** parameters control the production of the spin-1 resonance while the **\*\_v\*** and **\*\_a\*** parameters control the decay.

```
!---parameters that define spin 1 coupling to SM fields, see note
complex(8), public, parameter :: zprime_qq_left = (1.0d0,0d0) ! see note Eq. (4)
complex(8), public, parameter :: zprime_qq_right = (0.0d0,0d0)
complex(8), public, parameter :: zprime_zz_v = (1.0d0,0d0)! =1 for JP=1-
complex(8), public, parameter :: zprime_zz_a = (0.0d0,0d0)! =1 for JP=1+
```

## 4. Spin-2 parameters

The **a\*** parameters control the coupling of a spin-2 resonance to gluons in the production mechanism. The **b\*** and **c\*** parameters control the decay. One has the options to set the spin-2 couplings either from Eq.(18) or Eq.(19) from Ref. [2]. To switch between the two, use the parameter **generate\_bis**.

```
logical, public, parameter :: generate_bis = .true.
logical, public, parameter :: use_dynamic_MG = .true. ! .true. (=default),
! the spin-2 resonance mass with MG^2=(p1+p2)^2, otherwise fixed at M_Reso^2.

complex(8), public, parameter :: a1 = (1.0d0,0d0) ! g1 -- c.f. note
complex(8), public, parameter :: a2 = (0.0d0,0d0) ! g2
complex(8), public, parameter :: a3 = (0.0d0,0d0) ! g3
complex(8), public, parameter :: a4 = (0.0d0,0d0) ! g4
complex(8), public, parameter :: a5 = (0.0d0,0d0) ! pseudoscalar, g8

complex(8), public, parameter :: graviton_qq_left = (1.0d0,0d0)! graviton coupling to quarks
complex(8), public, parameter :: graviton_qq_right = (1.0d0,0d0)
```

```

complex(8), public, parameter :: b1 = (1.0d0,0d0)
complex(8), public, parameter :: b2 = (0.0d0,0d0)
complex(8), public, parameter :: b3 = (0.0d0,0d0)
complex(8), public, parameter :: b4 = (0.0d0,0d0)
complex(8), public, parameter :: b5 = (0.0d0,0d0)
complex(8), public, parameter :: b6 = (0.0d0,0d0)
complex(8), public, parameter :: b7 = (0.0d0,0d0)
complex(8), public, parameter :: b8 = (0.0d0,0d0)
complex(8), public, parameter :: b9 = (0.0d0,0d0)
complex(8), public, parameter :: b10 = (0.0d0,0d0)

```

```

complex(8), public, parameter :: c1 = (1.0d0,0d0)
complex(8), public, parameter :: c2 = (0.0d0,0d0)
complex(8), public, parameter :: c3 = (0.0d0,0d0)
complex(8), public, parameter :: c41= (0.0d0,0d0)
complex(8), public, parameter :: c42= (0.0d0,0d0)
complex(8), public, parameter :: c5 = (0.0d0,0d0)
complex(8), public, parameter :: c6 = (0.0d0,0d0)
complex(8), public, parameter :: c7 = (0.0d0,0d0)

```

### III. EXAMPLES

The below examples are not meant to be a complete set, but rather some interesting and relevant cases. In many cases, the example is not the only way to produce such a scenario.

#### A. $J^P = 0_m^+$ resonance, $X \rightarrow ZZ$ or $WW$

```

logical, public, parameter :: generate_as = .true.

complex(8), public, parameter :: ahg1 = (1.0d0,0d0)
complex(8), public, parameter :: ahg2 = (0.0d0,0d0)
complex(8), public, parameter :: ahg3 = (0.0d0,0d0) ! pseudoscalar
complex(8), public, parameter :: ahz1 = (1.0d0,0d0)
complex(8), public, parameter :: ahz2 = (0.0d0,0d0)
complex(8), public, parameter :: ahz3 = (0.0d0,0d0) ! pseudoscalar

```

#### B. $J^P = 0_m^-$ resonance, $X \rightarrow ZZ$ or $WW$

```

logical, public, parameter :: generate_as = .true.

complex(8), public, parameter :: ahg1 = (1.0d0,0d0)
complex(8), public, parameter :: ahg2 = (0.0d0,0d0)
complex(8), public, parameter :: ahg3 = (0.0d0,0d0) ! pseudoscalar
complex(8), public, parameter :: ahz1 = (0.0d0,0d0)
complex(8), public, parameter :: ahz2 = (0.0d0,0d0)
complex(8), public, parameter :: ahz3 = (1.0d0,0d0) ! pseudoscalar

```

#### C. $J^P = 0_m^+$ resonance, $X \rightarrow \gamma\gamma$

In practice, the example  $X \rightarrow \gamma\gamma$  from this section, Sec. IIIC and the next Sec. IIID are kinematically the same but are presented only to illustrate how one takes care of this final state.

```
logical, public, parameter :: generate_as = .false.
```

```
complex(8), public, parameter :: ghg2 = (1.0d0,0d0)
complex(8), public, parameter :: ghg3 = (0.0d0,0d0)
complex(8), public, parameter :: ghg4 = (0.0d0,0d0)    ! pseudoscalar
complex(8), public, parameter :: ghz1 = (0.0d0,0d0)
complex(8), public, parameter :: ghz2 = (1.0d0,0d0)
complex(8), public, parameter :: ghz3 = (0.0d0,0d0)
complex(8), public, parameter :: ghz4 = (0.0d0,0d0)    ! pseudoscalar
```

#### D. $J^P = 0^-_m$ resonance, $X \rightarrow \gamma\gamma$

```
logical, public, parameter :: generate_as = .false.
```

```
complex(8), public, parameter :: ghg2 = (1.0d0,0d0)
complex(8), public, parameter :: ghg3 = (0.0d0,0d0)
complex(8), public, parameter :: ghg4 = (0.0d0,0d0)    ! pseudoscalar
complex(8), public, parameter :: ghz1 = (0.0d0,0d0)
complex(8), public, parameter :: ghz2 = (0.0d0,0d0)
complex(8), public, parameter :: ghz3 = (0.0d0,0d0)
complex(8), public, parameter :: ghz4 = (1.0d0,0d0)    ! pseudoscalar
```

#### E. $J^P = 2^+_m$ resonance, $X \rightarrow ZZ$ or $WW$ or $\gamma\gamma$

```
complex(8), public, parameter :: a1 = (1.0d0,0d0)    ! g1 -- c.f. draft
complex(8), public, parameter :: a2 = (0.0d0,0d0)    ! g2
complex(8), public, parameter :: a3 = (0.0d0,0d0)    ! g3
complex(8), public, parameter :: a4 = (0.0d0,0d0)    ! g4
complex(8), public, parameter :: a5 = (0.0d0,0d0)    ! pseudoscalar, g8
complex(8), public, parameter :: graviton_qq_left = (1.0d0,0d0)! graviton coupling to quarks
complex(8), public, parameter :: graviton_qq_right = (1.0d0,0d0)
```

```
logical, public, parameter :: generate_bis = .true.
logical, public, parameter :: use_dynamic_MG = .true.
```

```
complex(8), public, parameter :: b1 = (1.0d0,0d0)
complex(8), public, parameter :: b2 = (0.0d0,0d0)
complex(8), public, parameter :: b3 = (0.0d0,0d0)
complex(8), public, parameter :: b4 = (0.0d0,0d0)
complex(8), public, parameter :: b5 = (1.0d0,0d0)
complex(8), public, parameter :: b6 = (0.0d0,0d0)
complex(8), public, parameter :: b7 = (0.0d0,0d0)
complex(8), public, parameter :: b8 = (0.0d0,0d0)
complex(8), public, parameter :: b9 = (0.0d0,0d0)
complex(8), public, parameter :: b10 = (0.0d0,0d0)
```

## IV. RELEASE NOTES

In going from v2.0.2 to v2.1.x, the updates are as follows:

- Histograms are written in file (default: ./data/output.dat) and no longer on the screen. How to understand the histogram data and how to plot is briefly described in the output.dat file.
- Added tau masses

- Added lepton interference in the ZZ4l final state
- Added switch `generate_as` to choose couplings in spin-0 case (works for on- and off-shell resonance). The default is `".false."`.
- Added the possibility to change graviton-quark couplings. The new parameters are `graviton_qq_left`, `graviton_qq_right` and correspond to  $0.5*(1-\gamma^5)$  and  $0.5*(1+\gamma^5)$  helicity projectors, respectively. Up to now the coupling was always vector-like. This is also the new default, `graviton_qq_left = graviton_qq_right = 1`.
- The random seed is now fixed with `gfortran`.
- The call `"./JHUGen help"` prints out all available command line options
- Added new command line option `"Unweighted=0 or 1"` (default is 1)
